Transform Your Career!

A simple equation: our company + your career = Exciting Growth

Teamwork, growth opportunities and challenging work! Scintel is dedicated to build it's brand and service offering by creating talent teams of problem solvers with a variety of consulting technology and business backgrounds.

About Our Company

Scintel Technologies Inc. is an Atlanta, GA based company that assembles solutions to business problems for Global 2000 organizations through the application of outsourcing and enterprise consulting. We partner with our clients to conceptualize and realize technology driven business transformation initiatives by using a low-risk delivery model to accelerate schedules with a high degree of time and cost predictability. Our Technology and Delivery Innovation initiatives ensure that our clients are constantly equipped with solutions, frameworks and skills to meet emerging opportunities and threats.

Job Summary

- This is a Senior Technical Lead and Onsite Coordinator role. The ideal candidate will have a strong understanding of formal Agile / Scrum processes. As Onsite Coordinator the person will manage offshore development of applications involving Microsoft technologies.
- Should be able to provide deep technology architecture direction and guidance on projects. Responsible from initial vision through system implementation and deployment.
- Will interact with the entire project team to understand requirements; recommend and provide guidance and implementation assistance; and manage project schedules. The right person will also work closely with the client architect in supporting initiatives.

Key Responsibilities

- Must be able to understand key concepts of the technology and the client's business, and work to deliver to these; must be able to analyze requirements, and recommend innovative solutions which meet the

- business needs of all parties, and must have the technical expertise to deliver these on-time.
- Must be able to use their expertise to recommend innovative technology solutions which meet the business needs of all parties, and must have the technical expertise to contribute to the delivery of these projects.
- Must have ability to deliver formal and informal technology-based training to delivery teams on an individual or team basis.
- Must design, build, and implement solutions that conform to industry standards, and define the best practices for these, utilizing published best practices and past project experience where necessary.
- Mentoring new employees in the adoption of these standards, and developing templates and frameworks to facilitate the implementation of these standards on projects.
- Typically performs work at the client site but may also work at a SCINTEL Consulting office location as appropriate
- Expected to create knowledge capital that can be leveraged to accelerate project delivery, improve quality and to secure new engagements
- Interprets Scope of Work, Interfaces with architects and client management to interpret technical/functional goals and objectives for the project.
- Sets quality standards for project
- Participates in scoping, estimating and risk management efforts
- Effective client management, facilitation and communication skills
- Conduct code reviews for on-going projects to ensure that code quality is at the highest level possible and design patterns are being used which are appropriate for the project.
- Provide detailed estimates of the level of effort associated to implement the technical portions of a project.
- Coach and mentor junior technical resources.
- Manage the software development through communication with developers.
- Review completed software to ensure adherence to requirements and client standards.

- Manage defect corrections during development and system testing.
- Coordinate implementation of software, adhering to client Change Management Standards and Standard Operating Procedures.

Skill Requirements

- Bachelors Degree is preferred
- Agile or Scrum Master Certification
- Previous health care experience is a plus
- Polished and effective communication skills
- Ability to work in a fast-paced environment of rapid change
- Must have extensive skills in designing Microsoft based solutions,
- Must have a thorough understanding of .net and Microsoft technologies
- Must be able to successfully perform multiple assignments at one time, potentially across various technologies at once, including participating on multiple projects simultaneously while individually contributing technical expertise to the successful delivery of technical solutions.
- 10 - 12 years of technical software design and architecture work experience in large scale systems
5 to 8 years implementing Microsoft .net solutions
- Must be Strong at project management and managing client expectations.
- Very good interpersonal skills, critical thinking, written and oral communication communications skills and strong technical documentation skills required.
- C/C++ knowledge, in mostly unmanaged code working preferably in a “neuron data” framework
- SQL optimization knowledge
- SQL server
- Demonstrated ability to manage multiple projects and tasks, prioritize competing deadlines, and work effectively under pressure

- The ability to work effectively in a loosely structured team environment that demands a high degree of cooperation, flexibility, teaming, cross group and real-time responsiveness
- Strong understanding of the SDLC, and good Analytical and problem solving abilities
