Transform Your Career!

A simple equation: our company + your career = Exciting Growth

Teamwork, growth opportunities and challenging work! Scintel is dedicated to build it's brand and service offering by creating talent teams of problem solvers with a variety of consulting technology and business backgrounds.

About Our Company

Scintel Technologies Inc. is an Atlanta, GA based company that assembles solutions to business problems for Global 2000 organizations through the application of outsourcing and enterprise consulting. We partner with our clients to conceptualize and realize technology driven business transformation initiatives by using a low-risk delivery model to accelerate schedules with a high degree of time and cost predictability. Our Technology and Delivery Innovation initiatives ensure that our clients are constantly equipped with solutions, frameworks and skills to meet emerging opportunities and threats.

Job Summary

- This is a QA Lead, onsite Coordinator role. The ideal candidate will have a strong understanding of formal Agile / Scrum processes. As Onsite Coordinator the person will manage the offshore QA team
- Create a Behavior Driven Development (BDD) testing solution and BDD tests against the application
- Provide guidance to the members of the development team on Test-Driven Development (TDD) and Designing for Testability (DFT)

Key Responsibilities

- Lead and manage QA resources both at onsite and offshore
- Responsible for the day-to-day execution, management, and reporting of the testing components, including managing resources, scope and meeting deadlines according to plan.
- Manage the creation of test environments, test data, IDs, and coordinate all test activities
- Integrates working with the project manager, the project management deliverables for the test component of the project activity into the overall project management deliverables for the project.
- Monitors scope and requirements changes, assesses the impact on the test management deliverables and adjusts the test management deliverables and the test oriented project management deliverables to deal with the change
- Manage testers, automated testers and test coordinators assigned to work on the project.
- Accountable for the testing quality from start to finish, which includes editing and maintaining test strategies, transformation of test strategies into test plans, execution of test plans, and the evaluation of test results.
- Prepare and maintains the master test plan and continuously provide strategic improvement of test management standards and procedures.
- Plan, organize, direct and execute the test process and manage test releases.
- Define, prepare, monitor and adjust test-level plans and manage scope changes.
- Participates in the review of requirements definition deliverables looking gaps in the requirements from a testing perspective and for traceability and transformability of the requirements into test strategy, test plans and test cases
- Work closely with the IT team and Business Users to support the development of test cases in conjunction with testing level requirements

Skill Requirements

- Minimum of 10 years experience with expertise in managing all phases of systems testing, including traceability of requirements, test plan preparation, test case/test script management, test project plan creation, test case execution and tracking, release management
- Five years of experience in software programming, analysis or engineering.
- .NET development experience
- Web-based applications development experience
- Offshore development management experience a plus
- Knowledge or experience in Telerik/Specflow is a plus
- PMP certification desired
