EMPOWERING INTELLIGENT BUSINESS

we know **QA**

we know QA

RIGHT THE FIRST TIME... EVERY TIME

Finding a defect once a system is in place has a profound impact on your time, your resources, and your ROI. Scintel works with you at every step of the development phase – starting before the first line of code is ever delivered – to advance quality across the entire software delivery life cycle. Our scope of services includes the standard testing offerings that you expect, plus a wide range of specialized testing that other companies simply don't offer, for as little as one-fifth the cost of doing it yourself. Scintel helps you:

- **Understand** – and address – the underlying issues that create your development challenges
- **Identify** problems and prevent defects before they surface
- **Achieve** truly independent validation of internal or third-party development efforts
- **Increase** operational efficiency by 35% or more through process optimization, test automation and reusability

A FOCUS ON PREVENTION

Scintel is about solutions, not complexity. Our QA architects work with you to make sure your procedures are followed, while drawing on extensive multi-industry experience to recommend process improvements that prevent defects in the first place. SDLC and STLC are aligned with parallel testing at each stage of the development process. Your solution is custom designed to address your needs, seamlessly integrate into your development organization and deliver reliable, long-term results. Then we continue in the role of your ongoing quality advocate, developing innovative process improvements and solutions.

ACCOUNTABILITY, CONSISTENCY, PRECISION

Just like you, we hold ourselves accountable for every aspect of every project. We set aggressive goals, take the lead, and deliver the results that matter to your organization down to the last critical detail. Scintel's technical and industry expertise goes well beyond QA and testing. From production support to software development to BI and data warehousing, we pride ourselves on our work and the value we can offer you as a client.

“Scintel provided critical support for the testing efforts on a critical software upgrade. In just 6 weeks, they developed an innovative new testing methodology, created and executed almost 700 test cases, and still made valuable process improvement recommendations to our user testing team.”

James Buckalew, AirTran Airways

PRECISION IN IT

Scintel has developed the QA Center of Excellence to focus on sustaining quality – from requirements, design, development, quality assurance, security and compliance to deployment and ongoing support. Our dedicated practice includes CIOs, IT managers, engineers and technical subject matter experts, all focused on analyzing the challenges facing your organization. We work with you to explore multiple solutions and empower you to better prevent and detect problems throughout your enterprise.

The Scintel Difference

Scintel is your partner in the truest sense of the term. We work as an extension of your own team, putting our resources and reputation on the line. That's how we built our business – with integrity, accuracy and delivery that is on time, on budget and exceeds expectations.

The New Benchmark for QA and Testing

Scintel delivers mission-critical testing for new applications and better management of old ones, including:

- **Standard Testing** such as functional regression, integration, application security, white box and black box
- **Static Testing** enhances requirements, preventing up to 20% of potential defects right at the source
- **AFASM** tool determines the optimal mix of traditional and automated testing
- **Browser Testing** guarantees a positive user experience, regardless of environment, browser, disability or device
- **Performance Testing** ensures your system can handle the load, today and tomorrow
- **User Acceptance Testing** guarantees the system is delivering the results users require
- **Code Quality and Embedded Systems Testing** includes run-time analysis, memory leak detection, performance profiling and component unit testing
- **Independent Validation** provides clarity among disparate development teams
