

Scintel Technologies 'Steps Out' and Exceeds ADA Fundraising Goals

Company is top fundraiser among McKesson Atlanta Team partners for the American Diabetes Association's Step Out: Walk To Fight Diabetes

We did it! Scintel Technologies is pleased to announce that we have exceeded our \$10,000 fundraising goal in the recent American Diabetes Association's (ADA) Step Out: Walk to Fight Diabetes. A Certified Business Partner of McKesson Corporation, Scintel committed to raising \$10,000 and to providing active participants in the event.

"Scintel's support in the fight to stop diabetes has been impressive," said Ian Lockwood, vice president, McKesson Corporate Strategy & Business Development. "Together, we presented a unified front in the Atlanta community as we 'stepped out' for an important cause. "

In addition to contributing volunteers and promotional items, Scintel also contributed more than half of the money raised by the participating McKesson business partners and helped the McKesson team become one of the top fundraisers overall at the Atlanta event.

"We enjoyed walking with McKesson and helping make a difference in the lives of thousands of Georgians and millions of Americans," added T.K. Ganesh, president and CEO of Scintel. "We look forward to partnering with McKesson again in our Atlanta community efforts."

"The 2010 Atlanta Step Out walk was a fun filled day for an amazing cause," commented Rhonda King, associate manager for the Association. "Friends and co-workers came together to help change the future of diabetes. Thanks to both Scintel and McKesson for their support of the Atlanta community and the fight against diabetes."

The ADA walk took place on September 25, 2010, at Grant Park in Atlanta, GA, one of over 150 Step Out events nationwide. More than 100,000 walkers from around the country have joined in the fight against diabetes. Each step they took and every dollar they raised helps the American Diabetes Association provide community based education programs, protect the rights of people with diabetes and fund critical research for a cure.

Scintel supports the Atlanta community through active involvement in charitable organizations such as Women in Technology (WIT), The United Way, the Georgia Minority Supplier Development Council (GMSDC) and the American Diabetes Association.
