A simple equation: our company +
your career = Exciting Growth

Teamwork, growth opportunities and challenging work!
Scintel is dedicated to build it's brand and service offering
by creating talent teams of problem solvers with a variety
of consulting technology and business backgrounds.

About Our Company

Scintel Technologies Inc. is an Atlanta, GA based company that assembles solutions to business problems for Global 2000 organizations through the application of outsourcing and enterprise consulting. We partner with our clients to conceptualize and realize technology driven business transformation initiatives by using a low-risk delivery model to accelerate schedules with a high degree of time and cost predictability. Our Technology and Delivery Innovation initiatives ensure that our clients are constantly equipped with solutions, frameworks and skills to meet emerging opportunities and threats.

Job Summary

- These are unconventional roles, requiring senior level professionals with 8+ years of IT experience, who enjoy the thought of being a hands-on, individual contributor.
- These individuals will be part of a growing consulting team providing sophisticated proof-of-concept, technology-based implementation, development, and architectural solutions to Fortune clients.
- This person will work directly with clients on tough computing problems demonstrating scalability, enhanced performance, metadata capabilities and productivity of our client's software.

Key Responsibilities

- Lead architect for the implementation of TIBCO's solutions
- Drive Master Data Strategy, Master Data Process Design, High Level Data Architecture, Data Migration, and the Implementation Roadmap defined by the business case

- Provide TIBCO MDM product expertise in pre-sales activities, assessments, complex demos, POC's, and the delivery of the solution & technical architecture
- Mentor customer, partner, and internal personnel in defining and delivering high quality TIBCO MDM solutions
- Interact with senior business and IT client contacts to provide team leadership and hands-on technical and functional expertise. Communicate the architectural vision, experiment with alternative architectural approaches, create interface specification documents and validate the architecture against requirements
- Architect a consistent framework for EAI decisions
- Understanding and link business architecture with the technical architecture for the enterprise
- Bridge the gaps between business and technology and deliver a "blueprint" for developing the enterprise technical structure
- Provide expertise as it relates to decision-making and priorities for the enterprise technical architecture
- Knowledge of technology trends in order to support current and future enterprise opportunities
- Designs application modules that work together to produce desired product. Ensures that completed modules provide functionality described by application experts and to ensure that performance guidelines are met.
- Provides high-level analysis and design reviews to other team members to avoid duplication of effort in solving the same application problems with different products.
- Interact with both technical / business management level staff and technical staff within client departments (DBAs, DAs, Developers, project managers,) as well as counterparts outside the organization (vendors)
- Leadership abilities during client engagements, ability to lead group meetings and large implementation efforts with client, TIBCO, and/or partner resources
- Client Relationship - Candidates must demonstrate ability to earn the trust of clients and build relationships at multiple levels and across multiple functional areas within client accounts
- Process Management - Candidates must demonstrate ability to work with the clients' defined work processes, or drive/manage processes onsite according to TIBCO AVF methodology

Skill Requirements

- Minimum of 6 years total experience in middleware environments, primarily using TIBCO Integration Products
- Experience (design through rollout) in enterprise software implementation; for an Architect, minimum 5 years experience leading the analysis and design of enterprise application architecture
- Successful software company developing complex, enterprise, mission critical products involving high-volume data processing.
- Well-versed in Enterprise Integration Pattern
- Strong knowledge of enterprise integration architecture, including SOA, ESB, Hub and Spoke, Messaging, File Transfer, and Shared DB
- Strong Knowledge in TIBCO Products
- Clear understanding of EDI, B2B and e-Commerce technologies
- Experience with UML modeling and effective communication for design reviews.
- Professional services / Consulting group at a large, enterprise software company (e.g., Oracle, SAP, Baan, i2, PeopleSoft, Siebel, etc.), or a technology-based professional services firm.
- Implementation experience, preferably CRM, ERP, or Data Warehouse
- Experience in implementing solutions in a complex enterprise environment, esp. experience designing and deploying in a SOA and/or an Events Driven Architecture
- Database schema knowledge and design is required.
- Extensive understanding of architectural design patterns and their implementations.
- Strong knowledge of AIX, Linux, Sun platforms.
- Background in vertical industries such as Retail, financial services, telecommunications, healthcare, insurance, government, logistics, and /or high-tech manufacturing.
- Advanced technology / architecture groups (or similar) at large, Fortune 500 / Fortune 50 companies.

- Knowledge of technologies such as: C, C++, .NET, Java, J2EE , JBOSS plus XML
- Bachelor's degree in Computer Science/Engineering or equivalent work experience.
- Also, candidates should have deep technical experience in areas involving large, complex data processing, high performance tuning, middleware management etc.
- This is a unique opportunity working for a fun, established, rapidly growing and global company providing services that are mission-critical at Fortune companies.
- We have an amazing corporate culture influenced by accomplished, well-rounded individuals who are passionate about solving incredibly sophisticated technology problems.
- Excellent client-facing, written and verbal communication skills are a must.
